

FIRMWARE UPDATE FANTEC DB-F8U3, 3TB HDD support

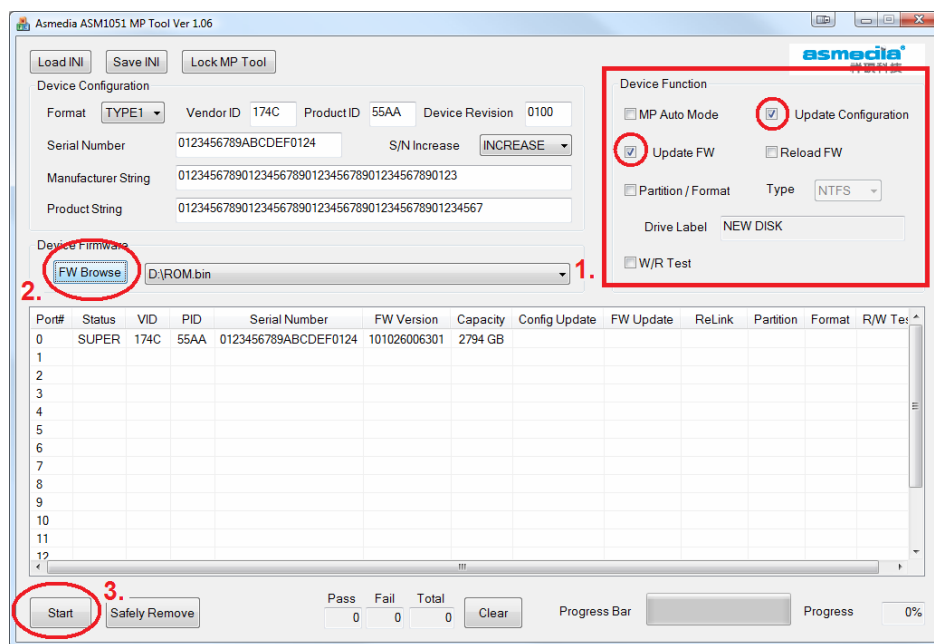

1. Please download the latest firmware on: www.fantec.de
2. Unzip the file: „Firmware_FANTEC_DB-F8U3_3TB_101026_00_63_01.zip“
3. Connect the Fantec DB-F8U3 via USB with your computer or notebook and power it on.
4. To update the firmware, open the „**MPTool.exe**“ application.
 - If you use a windows 32bit system please open the „MPTools_1.06v“ folder, and than the „Release32“ folder.
 - If you use a windows 64bit system please open the „MPTools_1.06v“ folder, and than the „Release64“ folder.
 - Please open the application „MPTool.exe“ with right click. Now you see the context menu, please click on “Run as administrator”

- Click on the „Unlock MP Tool“ button and then enter the password „asmedia“

1. Please enable "Update Configuration" and "Update FW". Please disable all other options.
2. Please click on „FW Browse “ and select the firmware file: “101026_00_63_01.bin”
3. Click on „Start“ and the firmware will be installed. The installation takes a few seconds.
